

Project Development Phase

Model Performance Test

Date	01 October 2026	Team ID	SWTID-2026-5775
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	5 Marks
Team Leader	Aafrin Mufina S	Team Size	5 Members
Team Members	Abinaya S, Abirami R, Akshaya Dharshini J, Akshaya Preethi V S	Module / Tool	ServiceNow Incident [Incident] & Microsoft Power BI

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.N o.	Parameter	Screenshot / Values																																										
1.	Data Rendered	Incident Management Dataset Extracted: • Source Table: ServiceNow Incident [incident] & User [sys_user] tables. • Total Records Rendered: 1,855 incident tickets. • Key Attributes Rendered: Incident Number, Priority, State, Incident Opened Date, Resolved Date, Closed Date, Caller VIP status, Assignment Group, Category, Subcategory, Close Code, Close Notes Length, and UI Policy Trigger Flags.																																										
2.	Data Preprocessing	Power Query Transformation Steps: 1. Type Conversion: Formatted opened_at, resolved_at to Datetime; formatted sys_id, number as Text. 2. Missing Value Imputation: Replaced null values in close_notes with 'Open/Active' and blank subcategories with 'General Support'. 3. Derived Columns Added: • Resolution_Duration_Hours = (resolved_at - opened_at) * 24. • VIP_Flag = Conditional column checking if caller has VIP badge active. • Policy_Compliance_Status = Validated mandatory resolution note length (>= 20 chars).																																										
3.	Utilization of Data Filters	Utilization of Interactive Slicers & Filters: • State Slicer: Multi-select dropdown (New, In Progress, On Hold, Resolved, Closed). • Priority Hierarchy Filter: Quick-filter buttons for P1-Critical, P2-High, P3-Moderate, P4-Low. • VIP Caller Toggle: Boolean filter isolating VIP user escalated tickets. • Date Range Timeline Slicer: Dynamic slider filtering incident created and closed dates.																																										
4.	DAX Queries Used	Key DAX Measures & Queries Implemented: • Total Incidents: Total_Incidents = COUNTROWS('Incident_Data') • VIP Incident Rate (%): VIP_Rate = DIVIDE(CALCULATE(COUNTROWS('Incident_Data'), 'Incident_Data'[VIP_Flag] = TRUE()), [Total_Incidents], 0) * 100 • Average MTTR (Hours): Avg_MTTR = AVERAGE('Incident_Data'[Resolution_Duration_Hours]) • UI Policy Compliance Rate (%): Policy_Compliance_% = DIVIDE(CALCULATE(COUNTROWS('Incident_Data'), 'Incident_Data'[Policy_Compliance_Status] = "Compliant"), CALCULATE(COUNTROWS('Incident_Data'), 'Incident_Data'[State] IN {"Resolved", "Closed"}), 0) * 100																																										
5.
